EXPERIENCE

Senior Business Intelligence Developer | Omega Accounting Solutions *January 2023 – March 2025*

- Designed and maintained 50+ Power BI reports for various users such as C-level executives to monitor business pipelines and metrics, operational team to see their monthly progress, and external clients to view customized reports
- Consulted with an external water park facility and designed a 5-page Power BI report to view guest counts at each of the different facilities, operational capacity percentages, average paid amount, and the average rate paid for lodging
- Optimized an old data model in Power BI that previously ingested 3.7 GB worth of data down to 2.5 MB worth of data by moving logic for transforming the data from Power Query to a SQL query using CTE's and window functions to simplify the query creation
- Led a team of 4 developers to create a web app in Python/Flask for calculating tax credits with CI/CD configured through GitHub Actions. This web app added $10-$15M in revenue to the business with $1B of client tax credits. User provided Excel files were held in Azure Blob Storage and user inputs were stored in an Azure SQL database
- Assisted the DBA in ETL processes for getting data into the data lake in Azure Blob Storage and into Azure SQL
- Led requirements gathering and automated many tasks for the operational team with RPA, Python, and web bots

Data Analyst | Centers for Disease Control and Prevention *August 2021 – December 2022*

- Led and designed the implementation of a Power BI report that aggregated data from 4 notable healthcare data vendors and showed the number of infections and other health metrics for CDC researchers
- Produced ad-hoc reports for CDC researchers that looked at disparities for monoclonal antibody use amongst racial groups and finding the counts of actual COVID-19 hospitalized patients vs. incidental COVID-19 patients
- Translated legacy SAS code to Python to count the number of patients by month by different demographics

CERTIFICATES

Fabric Analytics Engineer | Google *September 2024*

- Covers the entire data analytics process from pipelines, data modelling, to visualization in Power BI. This is a certificate meant for data engineers and data analysts

Power BI Data Analyst PL-300 | Microsoft *July 2022*

- Covers the following: Prepare the data; model the data; visualize and analyze the data; and deploy and maintain assets in Power BI

PROJECTS

Author Classifier *April 2021*

- Created a machine learning algorithm (KNN) that identified the author of a book based on the choice of words that the author uses. Used a cosine similarity metric for calculating the distance between different book corpuses and used the KNN model to choose the author with the closest distance.

EDUCATION

California State University, Fullerton
Bachelor of Science, Computer Science *August 2019 - May 2021*
GPA: 3.51 / 4.00
Relevant Courses: Machine Learning, Data Science, Artificial Intelligence, Databases, Software Design, Software Testing, Software Architecture, Algorithm Engineering, Operating Systems, Computer Communications

SKILLS

Power BI, Python, R, SQL, API, Databricks, Bash, Linux, Data Modelling, Data Analysis, Web Hooks, Git, GitHub, Pandas, Numpy, Jupyter Notebooks, Software Design, Selenium, Web Scraping, Flask, Azure Blob Storage, Azure Functions, Azure SQL, Azure Data Factory, Azure Document Intelligence, Azure App Service, RPA, Power Automate, Zapier
